

ATTACHMENT 9. PAST PERFORMANCE

Carpinteria Valley Water District Carpinteria Groundwater Basin Sentry Well Project

The District has successfully executed and completed projects under two separate LGA grant agreements. The 2003 LGA grant (Grant Agreement No. 4600001824) consisted of two separate projects: a Wellhead Protection Program; and an ASR Demonstration Program. Both of these projects were completed on time, within budget and provided valuable hydrogeologic information related to CGB water quality protection issues, and technical information regarding conjunctive use options for the CGB.

The 2007 LGA grant agreement (Grant Agreement No. 4600008188) was recently completed, again on time and within budget. The project under this grant agreement consisted of a hydrogeologic update of CGB conditions and preparation of a ground water flow model. Both of these tasks were executed by Pueblo and provided the District with important groundwater basin management tools.

The District's track record of successful completion of LGA funded projects and proactive management of the basin establishes precedent that projects pursued and executed by the District with LGA funding will be equally important and successful as those that have been completed in the past.
